EDUCATION

Shiv Nadar University

B.Tech in Computer Science and Engineering

Noida, Delhi-NCR, India

Aug 2023 Jul 2027

EXPERIENCE

Software Engineering Intern, Abacus Desk

May 2026 Jul 2026

- Solely built **Microtek IDM**, a 10-module warehouse inventory and dispatch system covering warehouse operations, vendor management, and IT asset tracking for a live client, replacing a fully manual, paper-based process across daily operations for **1,880+ warehouse workers**, backend, frontend, and database all handled independently.
- Added role-based access so each warehouse team only sees what's relevant to their job, and ran a full security review, fixing every issue found before handoff estimated ***30% cut** in manual tracking errors vs. the paper process it replaced.
- Personally led requirements-gathering with **10+ client stakeholders** across 3+ hour sessions, turning day-to-day warehouse operations into a working system design.

Software Development Intern, CodeClowns

May 2025 Aug 2025

- Built a recommendation engine for the **Dwij AI** test-prep platform that suggests relevant study material to students, deployed on **GCP**.
- Cut study-material load times by **20%** and reduced unnecessary server requests by **15%** through smarter caching and query design.

Backend Development Intern, CodeClowns

May 2024 Oct 2024

- Rebuilt 12+ backend services to run reliably under heavy traffic without data conflicts, restructuring the underlying databases in the process.
- Achieved a **35% reduction** in response time and a **25% increase** in data throughput; tracked down performance issues through hands-on profiling.

PROJECTS

MorphDAG: Blockchain Transaction Engine

- Built a faster way to process blockchain transactions in parallel by smartly detecting which ones would conflict.
- Achieved a verifiable **4.3x speed increase** over standard blockchain benchmarks; results published in **IEEE**.
- Tools: Go, Ethereum

GladMeds: AI Healthcare & Emergency App

- Solely built and shipped an AI-powered health app to production a conversational medical assistant, a medicine safety scanner, an emergency SOS tool with nearby-hospital lookup, and encrypted personal-record export.
- Built secure Google sign-in and end-to-end encrypted data storage end-to-end (frontend, backend, auth); patched a critical framework vulnerability (React Server Components CVE) post-launch with zero downtime.
- Tools: TypeScript, Next.js, Vercel

GradLedger: Alumni Mentorship Platform

- Built a full platform for alumni to share resources and mentor students backend, frontend, and database design all handled independently.
- Built 10+ backend APIs with login verification and identity checks.
- Tools: Go, Python, Next.js, Solidity

OPEN SOURCE CONTRIBUTIONS

Community Projects

- Shipped a merged pull request to **freellmapi**, a widely-used open-source API gateway added rate limiting, access controls, and request-validation logic to the admin backend.
- Shipped a merged pull request to **MorphDAG**, a published blockchain research project added a performance-detection feature now part of the maintainers' official benchmark suite.

TECHNICAL SKILLS

Languages: Go, C/C++, Python, TypeScript/JavaScript, Java, Solidity, Bash

Web & Mobile: Node.js, React, Next.js, Flutter

Databases: PostgreSQL, MongoDB, MySQL, Redis

Tools: Git, Docker, GCP, AWS, Linux

Other: system design, code review, teamwork across technical and non-technical stakeholders

ACHIEVEMENTS

Smart SNU Hackathon'25 1st Place: Built a high-performance agricultural app that ran smoothly even on lower-end phones. 

IEEE Publication: Co-authored a published paper on faster blockchain transaction processing (4.3x speed improvement).
